Equipment Rental App

Project by: Apurva Patel,
Lauren Kirkley,
Jameson Evans

Our Idea

- An app that allows users to rent equipments from other users.

Goals of Sprint 1

- Familiarize with Cross-Platform Dev. ReactNative & JavaScript (ES6)
- Implement landing page & auth flow
- Design four main app screens
  - Account (Update users account)
  - Search (User can search for different equipments)
  - Favorite or Inquiry (Not sure if we need favorite)
  - History (can see rental history, able to cancel or edit order active order.)

Issues Faced

- ReactNative & JavaScript (ES6) is little complex at first.. But it's good for cross platform dev
- Solving dependency and Versions related issue with ReactNative
- Integrating third-party libraries
- Come up with a design flow for app
- Figuring out app layout (UI related)
